

Water? Corrosion? Heat? Vibration?

Harsh environments and rough handling destroying your on-board battery chargers? They don't need to.

Guest Industrial Battery Chargers were designed for marine conditions: extreme weather, fluctuating input power, and abusive handling. Our epoxy-potted cases are the ultimate in durability, being completely waterproof, shockproof, and able to withstand most caustic gases and chemicals. All of our 115V chargers can handle input power fluctuating from 95-130vAC and between 50-60Hz.

JUST POT IT!

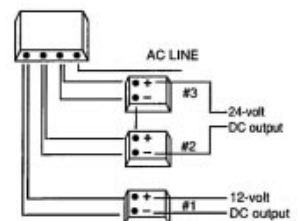

Industrial OEM Design Flexibility

Unlike transformer-type chargers, Guest Industrial chargers are completely silent and much lighter. They also require less space and eliminate heat build-up worries. Guest offers 30 standard models, from 0.5A@6V to 15A@36V. Virtually any of our standard on-board chargers can come with options, such as custom output cable lengths and terminals, without incurring any additional engineering costs.

Exclusive: Multi-Task Charging (MTC™)

Guest MTC™ chargers house several special-task chargers in one convenient housing.

12v/24v-12

Each converter automatically delivers closely-regulated, 3-stage charging to optimize each battery's recharge cycle. Perfect for multi-battery applications. For example, a vehicle with one starting battery and two constant-use batteries, each of which will have unique requirements for optimum charging.
