

Awkward, Made Easy

A Speedglas® auto-darkening lens makes awkward welding positions a little easier. And a lot safer; welders can put the helmet in the safe down position before contorting into tight spaces. When the arc is struck, the lens instantly changes to the selected dark shade.

In fact, Speedglas users report that they can now do welds that were "impossible" with traditional lens. With constant UV/IR protection. Meets or exceeds all USA, Canadian & European safety standards.

When awkward also means fumes in your face, you need the Speedglas Fresh-air® Powered Air Respiratory System. Approvals: NIOSH (USA), IRSST (Canada).
