

# See 100% More

 **Speedglas<sup>®</sup>**

Now welders can have an auto-darkening lens and peripheral vision in a “breathable” helmet!

The Speedglas<sup>®</sup> SideWindows<sup>™</sup> helmet has two shade #5 lenses that increase the welder’s viewing area by over 100%. SideWindows lenses allow welders to see potentially-hazardous peripheral objects, such as protruding beams, vehicles and other welders, with the helmet down.

Peripheral vision also lets welders move easily around their work area with constant protection from UV/IR radiation from other welders.

Also includes Hornell’s exclusive “breathable,” helmet design. Plus, four different Speedglas auto-darkening lenses to choose from.
