FEATURED PRODUCT

Welding Helmet Promotes Safety

The Speedglas ProTop combination hard hat, welding helmet and auto-darkening lens system is especially designed for welders working in areas with overhead hazards. A pivot mechanism in the product lifts the welding helmet away from the operator's face, and another axis "nests" the helmet down low over the hard hat, in a balanced and locked-down position. The helmet automatically unlocks when the welder pulls it back down into position over the face. Its lower center-of-gravity means the helmet is less likely to bump into obstacles as the welder moves around the work area.
